

# Conference Board Leading Economic Index: Continued Growth in June, All-Time High

July 20, 2017

by Jill Mislinski  
of Advisor Perspectives

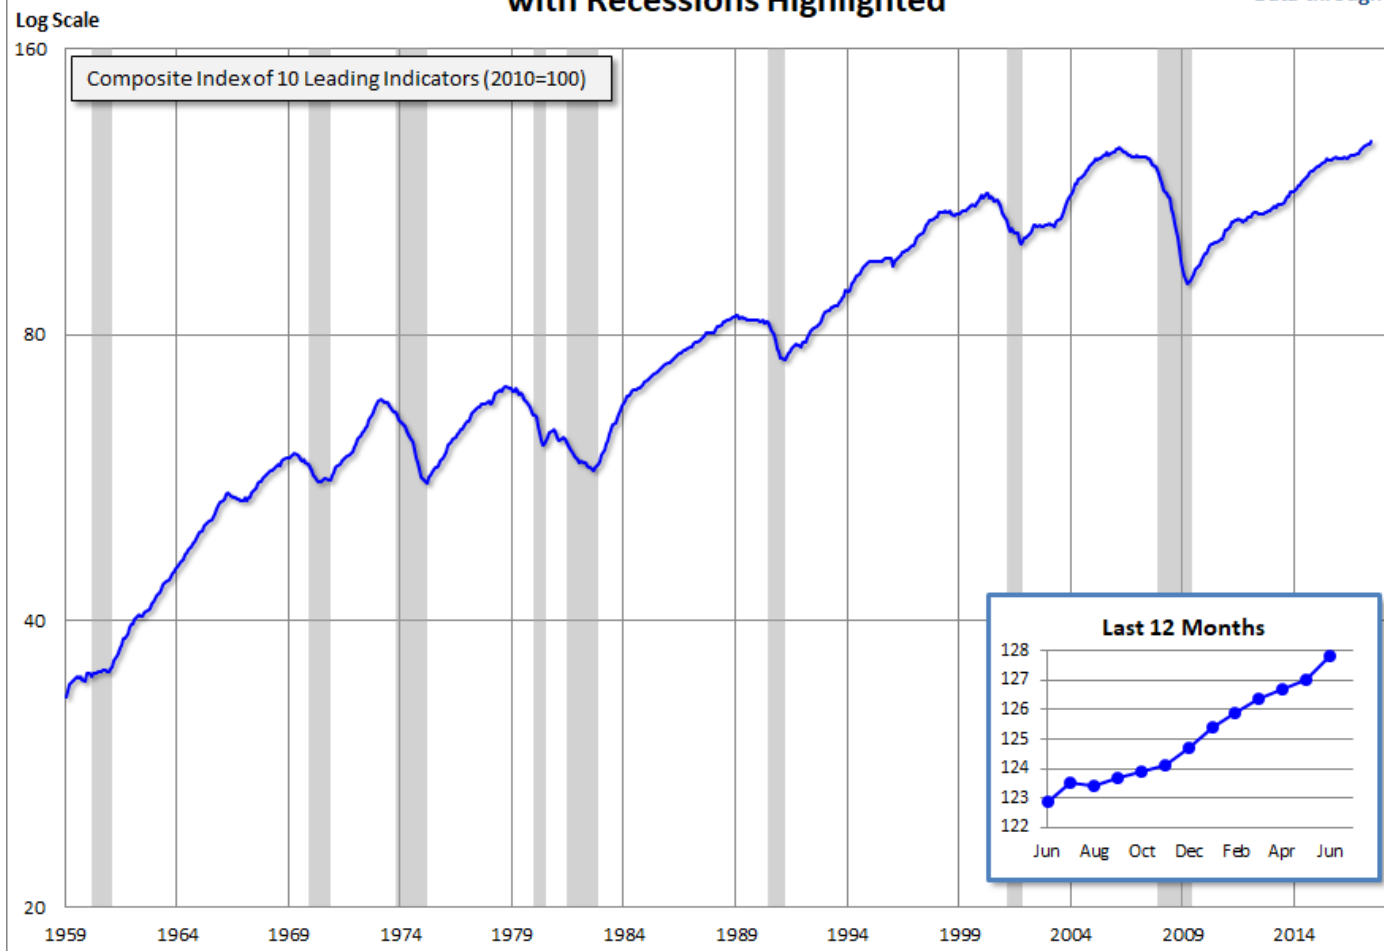

The Latest Conference Board Leading Economic Index (LEI) for June increased to 127.8 from 127.0 in May and is currently at an all-time high. The 0.6 percent month-over-month gain was better than the 0.4% increase forecast by Briefing.com.

The Conference Board LEI for the U.S. increased again in June, driven by positive contributions from the majority of its components, especially building permits which finally improved after several months of weakness. In the first half of this year, the leading economic index increased 2.5 percent (about a 5.0 percent annual rate), faster than the growth of 1.5 percent (about a 3.0 percent annual rate) during the second half of 2016. In addition, the strengths among the leading indicators have remained widespread. [Full notes in PDF]

Here is a log-scale chart of the LEI series with documented recessions as identified by the NBER. The use of a log scale gives us a better sense of the relative sizes of peaks and troughs than a more conventional linear scale.

Data through June

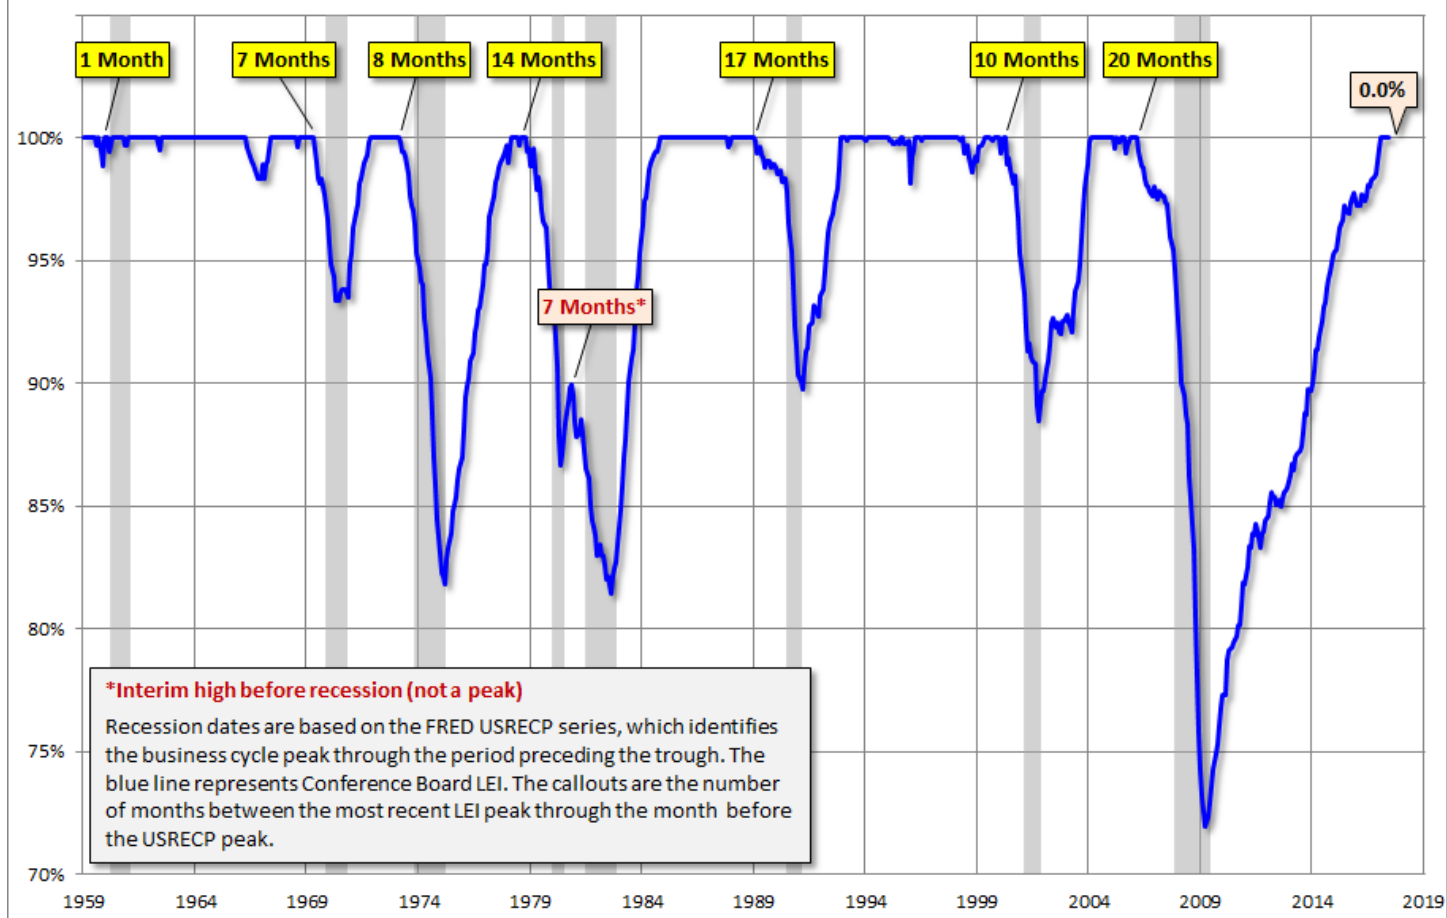

For additional perspective on this indicator, see the latest press release, which includes this overview:

“The U.S. LEI rose sharply in June, pointing to continued growth in the U.S. economy and perhaps even a moderate improvement in GDP growth in the second half of the year,” said Ataman Ozyildirim, Director of Business Cycles and Growth Research at The Conference Board. “The broad-based gain in the U.S. LEI was led by a large contribution from housing permits, which improved after several months of weakness.”

For a better understanding of the relationship between the LEI and recessions, the next chart shows the percentage-off the previous peak for the index and the number of months between the previous peak and official recessions.

### LEI and Its Six-Month Smoothed Rate of Change

Based on suggestions from Neile Wolfe of Wells Fargo Advisors, LLC and Dwaine Van Vuuren of RecessionAlert, we can tighten the recession lead times for this indicator by plotting a smoothed six-month rate of change to further enhance our use of the Conference Board's LEI as a gauge of recession risk.

## Conference Board Leading Economic Index Six-Month Moving Average of the Six-Month Rate of Change

dshort.com  
July 2017  
Data through June

■ Recessions   ■ Positive Change   ■ Negative Change   ● Latest value: 2.1%

**Lead Times Before Recessions**

Dec 1969 - Nov 1970: 3 months

Nov 1973 - Mar 1975: 2 months

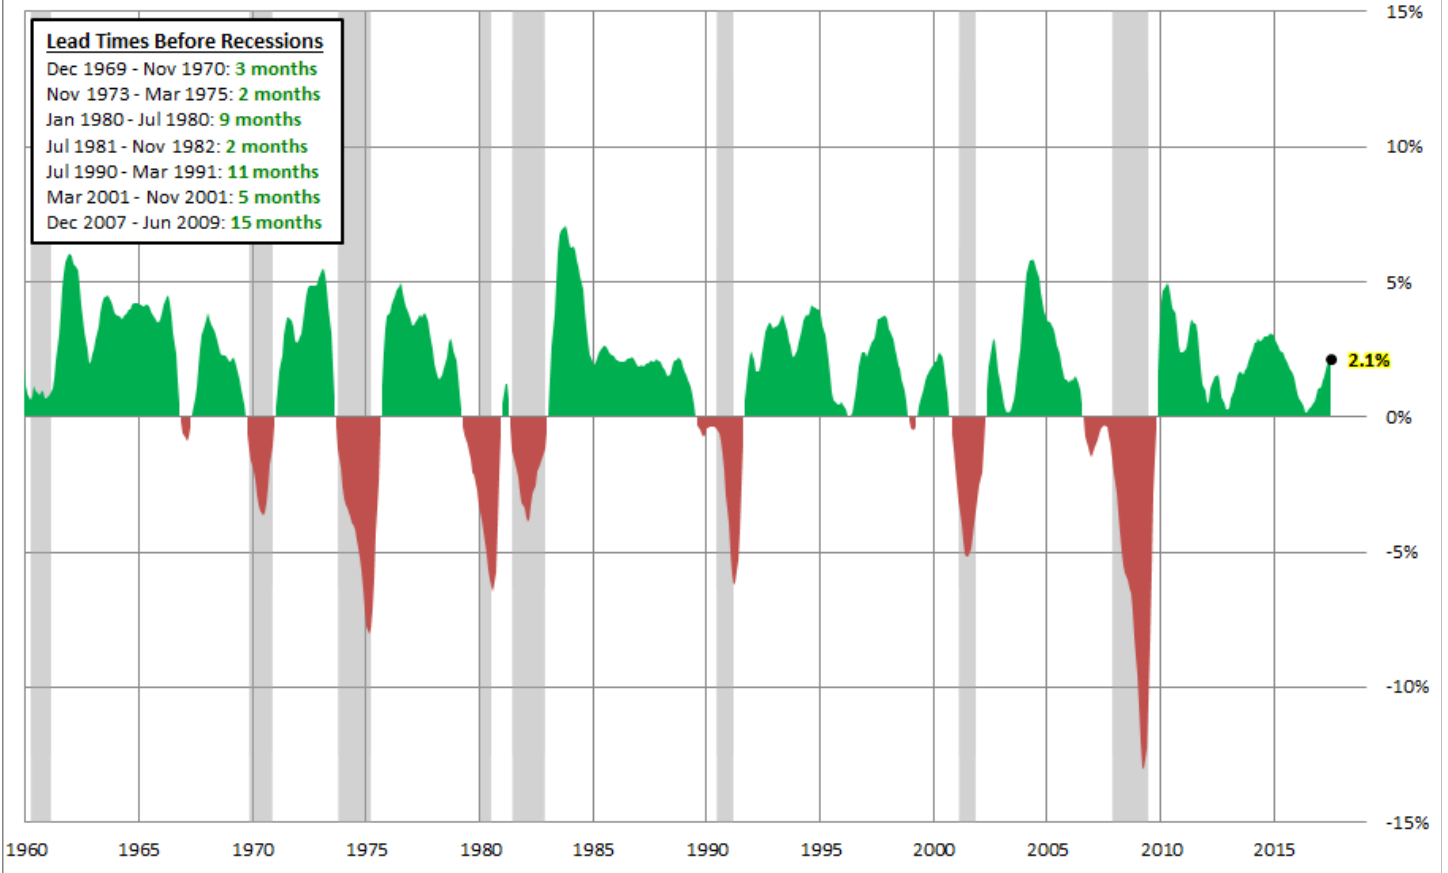

Jan 1980 - Jul 1980: 9 months

Jul 1981 - Nov 1982: 2 months

Jul 1990 - Mar 1991: 11 months

Mar 2001 - Nov 2001: 5 months

Dec 2007 - Jun 2009: 15 months

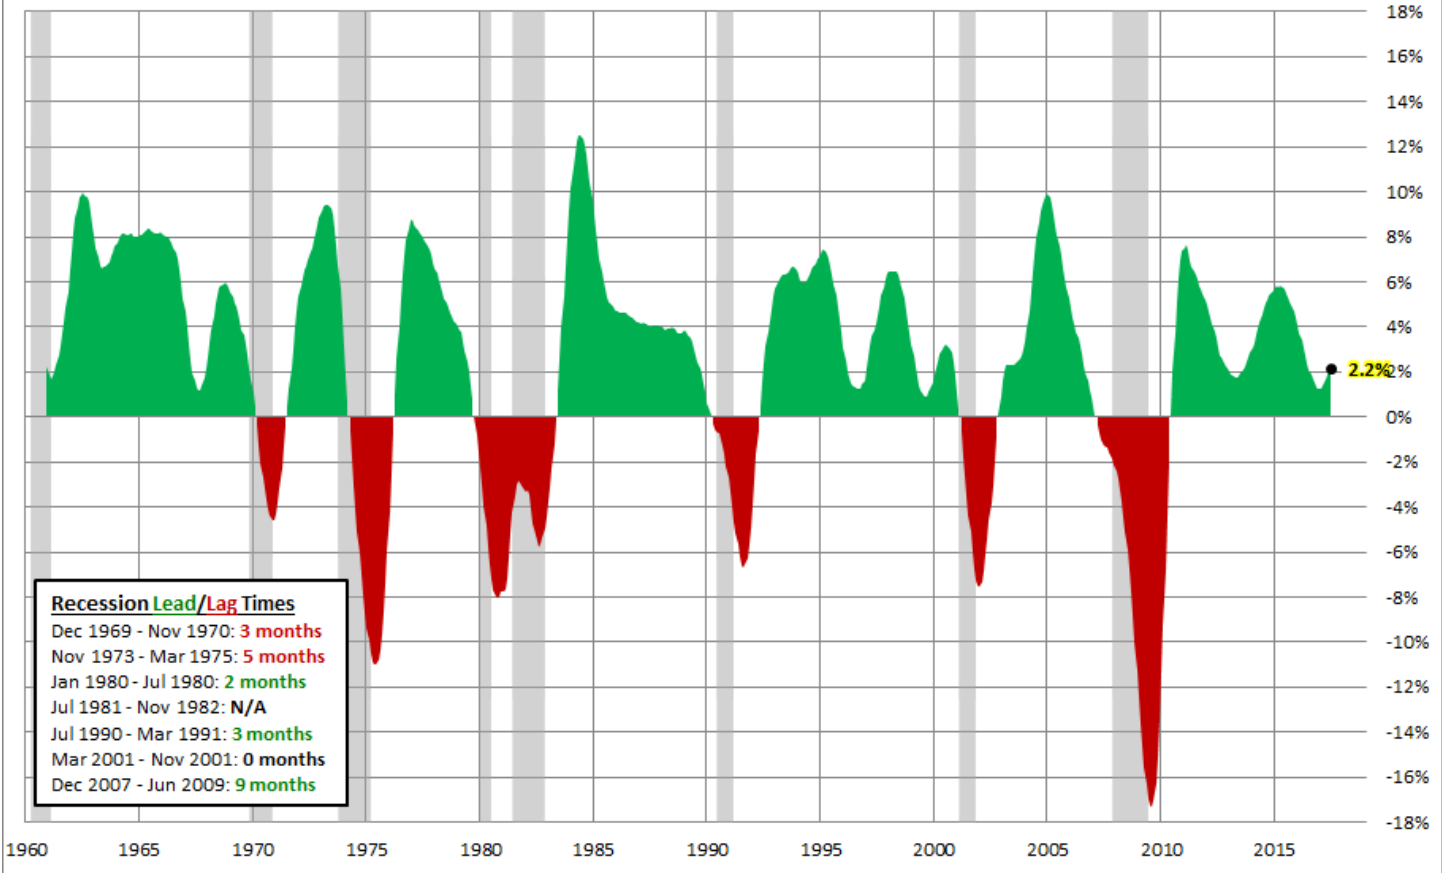

As we can see, the LEI has historically dropped below its six-month moving average anywhere between 2 to 15 months before a recession. The latest reading of this smoothed rate-of-change suggests no near-term recession risk. Here is a twelve month smoothed out version, which further eliminates the whipsaws:
