Kansas City Fed Survey: Activity Continued at Solid Pace
September 27, 2018
by Jill Mislinski
of Advisor Perspectives

The Kansas City Fed Manufacturing Survey business conditions indicator measures activity in the following states: Colorado, Kansas, Nebraska, Oklahoma, Wyoming, western Missouri, and northern New Mexico.

Quarterly data for this indicator dates back to 1995, but monthly data is only available from 2001.

Here is an excerpt from the latest report:

KANSAS CITY, Mo. – The Federal Reserve Bank of Kansas City released the September Manufacturing Survey today. According to Chad Wilkerson, vice president and economist at the Federal Reserve Bank of Kansas City, the survey revealed that Tenth District manufacturing activity continued to grow at a solid pace, and optimism for future activity remained high.

“Regional factories reported another solid month of growth,” said Wilkerson. “This was even with over two-thirds of respondents noting that tariffs had negatively affected their business.” [Full PDF release here]

Here is a snapshot of the complete Kansas City Fed Manufacturing Survey.
The next chart is an overlay of the general and future outlook indexes — the outlook six months ahead. Future factory indexes decreased in September to 27 from last month's 29.

The red dots show the monthly index itself, which is quite noisy. The 3-month moving average (blue line) gives a clearer sense of the trends.
For comparison, here is the latest ISM Manufacturing survey.
Let's compare all five Regional Manufacturing indicators. Here is a three-month moving average overlay of each since 2001 (for those with data).
Here is the same chart including the average of the five.
Here are the remaining four monthly manufacturing indicators that we track:

Texas Manufacturing Outlook Survey (TMOS)

Empire State Manufacturing Survey

Fifth District Manufacturing Survey (Richmond)

Philadelphia Fed Manufacturing Business Outlook Survey

Regional Fed Overview
